                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Perfect score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT diseases and transplant rejection

CC Laim 2; Fig 1; 58pp; English.

CC DNA encoding the water-soluble polypeptide with a high affinity for CC IFN-alpha and -beta is isolated by PCR, using appropriate

CC digonucleotides as primers and cloned CDNA as template. For example, CC the IFN-alpha and -beta receptor (030534), was incubated with oligos CC the IFN-alpha and -beta receptor (030533), was incubated with oligos CC lacks the transmembrane and cytoplasmic domains. Both forms bind CC lacks the transmembrane and cytoplasmic domains. Both forms bind CC IFN in the same way as antibodies so are immunosuppressants e.g. for CC toxic side-effects of known immunosuppressants such as steroids.

                                                                                                                                                                                                                                                                                                                                                                                                   New human alpha interferon receptor protein - useful for testing interferon agonists and in treatment or diagnosis Disclosure; fig 4; 30pp; French.

This recombinant human alpha interferon (IFN) receptor protein is useful for the testing of IFN agonists and for treatment and diagnosis of viral diseases and tumours. Antibodies raised against this protein can be used for blocking the receptor when required, eg where overexpression of alpha-IFN is harmful. The Abs are also useful for eg drug targetting. Variants of the protein, between residues 164 (Thr) replaced by Arg and an Asp inserted between residues 479 and 480, are also useful.

                                                                                                                                                                                                                                                                                                                                                            aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc.
Disclosure; Page 47; 52pp; French.
The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv.s block the activity of IFN alpha/beta and can be used to treat autoimmune diseases or to inhibit graft rejection. See also Q14239.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       R14488;

A recombinant soluble form of the extracellular domain of this receptor (R71723) has been used to raise immunomodulatory monocional antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New mammalian soluble interferon alpha-receptor forms used for inhibiting, modulating or modifying the activities of interferon(s) Disclosure; Fig 7: 46pp; English.

Human transmembranal interferon alpha receptor (IFNAR) (W21804) includes a 21-amino acid transmembrane region. Novel, splice-deleted IFNAR forms I (W21805) and 2 (W21805) have been detected that lack this transmembrane domain. These, soluble non-membrane bound polypeptides can be expressed in host cells and used to inhibit, modulate or modify the activities of interferons alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11-MAY-1995.

Compsn. of monoclonal antibodies against interferon receptor useful as immuno:modulator, eg. for treating AIDS Disclosure; Fig.2A-2B; 105pp; English.

A recombinant soluble form of the human interferon class I receptor protein extracellular domain, given in R71723, was expressed in either E. coli or COS cell hosts. The protein was used to raise immunomodulatory monoclonal antibodies.

Example 2: Fig 7: 46pp; English.

Novel splice-deleted interferon alpha-receptor (IFNAR) form 1

(W21805) is characterised by a new domain (S) which follows an end-deleted extracellular domain when compared to transmembranal irNAR (W21804). There is no transmembrane domain. The amino acid sequence is predicted from a cDNA clone (see also T73520) obtd.

Sequence is predicted from a cDNA clone (see also T73520) obtd.

If from human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 and 2 (see also W21806) probably regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating the activity of the multiple IFN subtypes. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells, to secure and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Abramovich C, Ratovitski E, Rever H,

Novel splice-deleted interferon alpha-receptor (IFNAR) form 2 (W21806) is characterised by a double deletion when compared to transmembranal IFNAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a clone (see also 773521) obtd. Intracellular domain. Soluble, non-membrane bound IFNAR splice-deleted forms 1 (see also W21805) and 2 may regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating IFN activities. They can be expressed activities of IFNS alpha and beta in cells, tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 95.5%;

PS Claim 2; Page -; 79pp; English.

CC This sequence is the human CRFB4 sequence, DNA encoding it is used in the CC recombinant DNA (I) of the invention. (I) comprises a sequence (S1) CC encoding the interleukin-10 (II-10) receptor (IIIOR) and a sequence (S2) cc encoding CRFB4, both operably linked to expression control sequences. CC Cells containing (I) may be used to identify agonists/antagonist of CC II-10. Agonists are potentially useful, e.g. for preventing allograft crejection, as vaccine adjuvants, for treatment of photosensitivity, CC inflammation, autoimmune disease and septic shock, while antagonists are potentially useful for increasing immune responses against tumours, CC viruses, bacteria and parasites (especially intracellular pathogens) and CC restore, e.g. by gene therapy, II-10 sensitivity to a cell that expresses a dysfunctional IIIOR and is able to bind II-10 but not to transduce a companie of control of a contivity in cells. Antibodies specific for CRFB4 are used to contain the control of contivity in cells. Antibodies specific for CRFB4 are used to contain the control of contivity in cells. Antibodies specific for CRFB4 are used to contain the control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of contr

The IFN-gamma receptor beta-subunit encoded by a cDNA clone derived from mouse B-cells is given in R75782. Recombinant beta-subunit, pref. with the transmembrane anchoring domain deleted or inactivated and with the cytoplasmic domain deleted, may be used to treat pathological conditions associated with endogenous IFN-gamma production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PT Novel human Zcytor? DNA encodes a type 2 cytokine receptor - useful PT for treating renal, neural, pancreatic and prostatic diseases PS Claim 1; Pages 55-59; 72pp; English.

CC This represents the Zcytor? cytokine receptor. Zcytor? is a ligand-
CC binding receptor polypeptide and is a novel member of the type 2 cytokine receptor family (CRF2). An expression vector containing the Zcytor CC polynucleotide, operably linked to transcription promoter, a sequence CC encoding a transmembrane and intracellular domain, or both, and a CC transcriptional terminator can be used to transform host cells for the CC encoding a transmembrane and intracellular domain, or both, and a CC encoding a transmembrane and intracellular domain, or both, and a CC encoding a transmembrane and intracellular domain, or both, and a CC encoding a transmembrane and intracellular domain, or both, and a CC excombinant production of the polypeptide. The sequences can be used to Study the Zcytor? gene and to isolate ligands binding to it Zcytor? is combinant production of the polypeptide. The sequences can be used to Stimulate proliferation and CC differentially expressed in the Kidney, pancreas, prostate or nervous can be used to Stimulate proliferation and CC differentiation of cell in these organs. The antagonists and agonists can also be used in the treatment of renal, neural, pancreatic and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Suppressing tumours in mammals with accessory factor 1 (AF-1) for interferon gamma, specifically induction of class I HLA antigens, including use of AF-1 DNA in gene therapy Disclosure; Fig 21A; 114pp; English.

The sequence is that of human interferon-gamma accessory factor-1. Incorporation of AF-1 into immune and tumour cells re-establishes normal function with elimination of malignant cells. Sequence 37 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO9505847-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human IFN-gamma accessory factor-1. Interferon-gamma; AF-1; tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 95-106679/14.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

interferon gamma receptor beta subunit - mouse
N.Alternate names: IFN-gamma R beta chain; IFN-gamma R species-specific cofactor;
C:Species: Mus musculus (house mouse)
C:Date: 06-Oct-1994 #sequence_revision 18-Nov-1994 #text_change 05-Nov-1999
C:Accession: A49947
R:Hemmi, S: Bohni, R: Stark, G:; Di Marco, F:; Aguet, M.
Cell 76, 803-810, 1994
A:Title: A novel member of the interferon receptor family complements functionalit
A:Reference number: A49947; MUID:94170381
A:Accession: A49947
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Note:

siochim. Biophys. Acta 1173:314-319(1993).

I Sincinok: Receptor for interferons alpha and Beta. Binding to Type

I IFNS TRIGGERS TYROSINE PHOSPHORYLATION OF A NUMBER OF PROTEINS

INCLUDING JAKS, TYK2, STAT PROTEINS AND IFN-R ALPHA-AND BETA-
SUBGUNITS THEMSELVES.

SUBGUNITS THEMSELVES.

SUBGULLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SUBGULLULAR LOCATIONS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

SUBGULLARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
